

DON'T COOK YOUR DOG!

DOGS DIE EVERY SUMMER...
even with the windows down,
in **minutes** cars turn into coffins

Symptoms : rapid breathing, panting, weakness, tongue or gums dark red or blue (signs before shock syndrome), glassy eyes, vomiting, diarrhea, loss of balance, etc...

What to do if your animal has a heat stroke :

- Lower his body temperature by **wetting him** with a **lukewarm cool liquid (not ICY cold)**
- Apply **damp towels containing ice** on his head, neck, thorax, lower abdomen, under his paws, his underarms, between his thighs
- **Ventilate** the wet animal with a **fan**
- Give **fresh water** if he can drink by itself
- Continue administering these first aid treatments while **URGENTLY** going to a **veterinarian**
